

በ Exam Class ከ ቀለሜ ቻናል ጋር በመተባበር የተዘጋጀ !

A. Electronic devices that perform only or	ne operation can be programmable device.
B. Logic devices provide timing and contr	rol operations function
C. Internet is example of network which c	connect millions of people
D. None	
4. Which of the following file type has self-d	
A. XML	C. PDF file D. NO-SQL database
B. SQL databases	big data indicates data in uncertainty due to data
	org data moreates data in uncertainty due to data
inconsistency and ambiguity? A. Velocity	C. Variety
B. Volume	D. veracity
DECEMBER OF THE PROPERTY OF TH	ators that are responsible for improving the
accessibility and quality of data.	and the same and t
A. Data Acquisition	C. Data Curation
B. Data Analysis	D. Data Storage
	for the distributed processing of large datasets
across clusters of computers using simple	
A. Hadrop	D. API
B. NoSQL	E. None
C. Big data	
management of the second of th	s used to transfer data from various sources to
Hadeop?	
	C. Analysing
A. Processing	
B. Ingesting	D. Visualizing
9. Which one of the following is not true about	
A. It is economical	C. It is flexible
B. It is scalable	D. It is rigid
10. Chatbots and Roboadvisors are best exa	ample for.
A. Context aware and Retention	C. Rule based Systems
B. Domain - Specific Expertise	D. Reasoning Machines
11. Which one is NOT application of AI?	
	C. Email spam filters
A Recommendation	
A. Recommendation B. Span chat	D. Voice recorder
A. Recommendation B. Snap chat 12. Which of the following statement is not to	D. Voice recorder

Introduction to Emerging Technologies Mid Exam

Total mark: 30% | Time allowed: 1hr 20 Minutes | Date: June 27, 2022 | Target group: 1st Year Students

General Instruction

- Switch off your phone.
- Write your answer on the space provided only.
- Write an appropriate answer for each question precisely and concisely.
- Attempting to copy from other students is prohibited.

Name 11 10 1109775 Sm 26

Part I: Write PRUE if the answer is correct or FALSE if the answer is incorrect (each

1pt)

- 1. A cyber-physical system is a mechanism that is controlled or monitored by computer-based algorithms, tightly integrated with the Internet and its users.
- 2. Nowadays, natural user interfaces such as gestures have gained increasing attention as they allow machines to control humans through natural and intuitive behaviours.
- 3. The ACID properties that guarantee RDBMS transactions provide flexibility with regard to schema changes and the performance and fault tolerance when data volumes and complexity grow, making them suitable for big data scenarios.
- 4. The idea of Artificial General Intelligence is the ability of an AI agent to learn, perceive, understand, and function beyond human being.
- 5. Clustered computing provide varying levels of fault tolerance to prevent hardware and software failures from affecting access to data and processing.

Part II: Choose the best answer for the following questions (each 1pt)

- 1. Which of the following technology introduced in the second industrial revolution?
 - A. Steam power

C. Hand phone

B. Internet

- D, Electrical power
- 2. Which one of the following is not the goal of HCI?
 - A. Improve the interaction between
- C. save time and money
- human and computer D. None
- B, promote uncertainty
- 3. Which of the following statement is not true?

1 | Page

Part 1: Write "True" if the statement is correct or "Frite" if the statement is incorrect. If are seen

- 1. Clerce therapy in the process of transferring individual genes between regardence
- 2. A time stamped series of immunistic records of data managed by a closer of computer in block close.
- Automobile computing is a steam of parametring remote servers that are housed on the internet.
- 4. In It31 hazed smart elly, the lovel of source materials leside container is detected by using 2000 technology.
- Centralization is the mide characteristics of bisosies.
- 6. Data processing layer is a near-nearing layer that executes various testes for the secu-
- Finial Recognition is an advanced type of object detection that not only recognizes a linear face in an image and ldentifies a specific individual.
- W. Phishing is a type of multilious software designed to extent money by blocking access to files or the computer system until the money is paid.
- Quantum comparing uses quantum bits to store data.

10. Information security is protecting all information assets, whether in hard copy or in fight free. Part II: Choose the correct answer for the following questions (1.55% excit)

- 11. Which one of the following is the application of loT in agriculture?
 - A. Monitoring microclimate condition.
- C. Identifying soil surviews in the still

B. Sensing soil moisture.

- 12. Which one of the following is NOT the network layer communication technology is lot actions or
- B. Z.Wave

- C. LoRui
- D. GPS
- 13. A sensor which is used to measure the change in motion as well as the orientation of the devices in
- B. Environment sensor
- C. Motion sensor D. All.
- 14. A network of devices that senses; accumulates and transfers data over the interne without human C. Artificial Intelligence D. All. intervention is
 - B. Augmented reality

- 15. Which one of the following is NOT the use of AR in medicine?
 - A. Surgery

C. CT-Sain

- D. Higher Engagement
- 16. Which one of the following is NOT the component of loT architecture?
 - A. Application layer

C. Sensing layer

B. Infrastructure Track unit

- D. Network layer
- 17. Which one of the following is an example genetic engineering?
 - C. Biotechnology

A. Nanotechnology

D. Cloud computing

B. Block chain technology

	and the second s
18. The process of hash identifying block in each blockshall	n is generated using cryptographic age
18	C SHA128 D.None
A. SHA256 B. SHA64 19. In which layer of IOT architecture does the process of	of identifying phenomena in the devices
peripheral and obtains data from the real world is	
A. Network layer	C. Data processing layer
	D. Application layer
20. Among the architecture of augmented reality systems,	which of the following is respondence to
collecting of real world data?	
A. Infrastructure Tracker Unit	C Visual Unit
D. Processing Unit	D. Name of the above
Which one is NOT the reason to use augmented real	ity in education?
A. Due to unaffordable learning material	
D. It brings an Interactive lesson in the classe	room
C. It decreases students' intellectual curiosity	
to a service in the classros	OID.
D. It attracts student attention in the colors of the process of recognizing repeated shapes, colors of the process of the	and other visual indicators in the second
A. Pattern detection	D. Facial Recognition
B. Image classification	
Part III: Fill the blank space in the given below with ap	propriate words (1.5 pts each)
23. The phenomenon that a qubit exists in two states at the	he same time is
The phenomenon that a qubit exists in two states at 24. A common connection point for multiple sensors	that accumulate and terward server

Introduction to Emerging Technologies Mid Exam

Total mark 30% Time Allowed: 1:20 | Date November 25, 2021 | Target Group: 1st Year Students

Name

ID:

Section:

General Instruction

- Write an appropriate answer for each question precisely and concisely on the separate answer sheet
- Any kind of cheating will nullify your result
- Switch off your cell phone before starting the exam

Part I: Choose the correct answer from the given alternatives (1.5 pts. each)

- Which one of the following is not correctly matched?
 - A Primary industries -> Getting raw materials
 - B Secondary industries > Manufacturing
 - Ternary industries -> Research and development
 - D. AH.
 - E. None
- From data analytics point of view, which one of the following data type is known as a selfdescribing structure?
 - A. Semi-structured Data
 - B Metadata Data
 - C. Structured Data
 - D. Unstructured Data
 - E. None
- Which one of the following is not advantage of Big Data?
 - A. Processing massive amounts of data

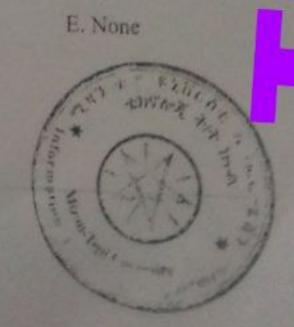

C. Handling a variety of data

H. Low latency data access

D. All

HARRE

SHOT ON A56 itel DUAL CAMERA

one of the following is odd?

A. Data science enables you to take better and faster decisions.

Data science has ability to prevent significant monetary loses only.

C. Data science allows to build intelligence ability in machines.

SHOT ON AScience can help you to detect algorithms.

A. Plan some surgical operation B. Ac. C. Real Life Problem Solving D. To. Which one of the following statement is D. Data Science can help you to detect fraud using advanced machine learning

B. Adapting to the environment and situations

D. To rule over humans

Which one of the following statement is not correct about the concept of Emerging Technology?

- A. New technologies that are currently developing which will ensure that there is minimal impact on our environment and to make society a better place to live.
- B. New technologies that are currently developing which will ensure that expected to create significant impact on our environment and to make society a better place to live.
- C. New technologies that are currently developing or will be developed over the next five to ten years, and which will substantially alter the business and social environment.
- D. New technologies that are continues development of an already existing technology

E. B&D

F. None

- 7. All of the following are the importance of forming clustered computing for big data analysis. Except,
 - A: Combining available resource storages and CPU and memory pooling are significant.
 - B. Clusters make it easy to scale horizontally by adding additional machines to the group.
 - C. Clusters provides low level of fault tolerance and availability.
 - D. None

- For taking decisions data must be?
 - A. Very accurate
- B. Massive
- C. Processed correctly
- D. Collected from diverse sources E. All
- Which of the following data value chain requires an expert which is responsible for improving the accessibility and quality of data?
 - A. Data Acquisition
- B. Data Analysis
- C. Data Usage

- D. Data Storage
- E. Data Curation
- F. None
- 10. Which type of Al refers to machines that perform any intellectual task with officiency like a human?
 - A. Weak Artificial Intelligence C. Super Artificial intelligence
 - B. Singularity and Transcendence D. General Artificial Intelligence

Part II: Fill blank space (2 pts. each)

- 1. Hadoop is a distributed file system that may run on a cluster of commodity machines, where the storage of data is distributed among the cluster and the processing is distributed too.
- 2. QAAA (ISA-8 describes the information flow with in the big data system to generate hidden pattern and useful knowledge from data.

Part III. Write a short answer for the following questions

- 1. List at least 3 application area of artificial intelligence and explain briefly? (3 Points)
- 2. Briefly explain the mapping of human thinking to artificial intelligence components to the band
- 3. What is human to computer interaction and how human beings interact with computers? (3 Points)
- (4.) List and explain basic components of Hadoop system (2 Points).

PART I: Write TRUE if the statement is correct and FALSE if the statement is incorrect.

1. Integer data type is used to store real numbers.

A. Velocity

B. Variety

2. Data is independent of information whereas information is dependent on data.

3. The goal of HCI is to improve the interaction between users and computers by making computers more user-friendly and receptive to the user's needs.

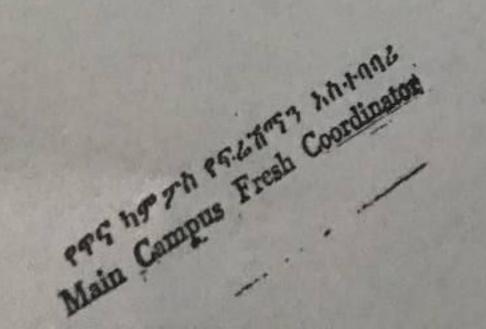

4. Internet is a collection of computers, servers, network devices or other devices connected to one another to allow the sharing of data.

5. Clustered computing is a framework that allows for the distributed processing of large

	datasets across clusters of computers using simple	e programming models.
PAR	T II: Choose the best answer among the alternativ	
	. "Information Technology" is an example of A. Primary Industry	C. Tertiary Industry
	B. Secondary Industry	D. Quaternary Industry
2	. All of the following are Service Enabling Device	
~	A. Modems	C. Switches

Part III: Fill in the blanks with appropriate word or phrase on the provided space 14. Data Selences uses scientific methods, processes, algorithms, and systems to extract knowledge and insights from structured, semi-structured and unstructured data. 15. Meta data is data about data that provides additional information about a specific set of data. 16. Hadoop is Open-source framework intended to make interaction with big data easier? 17. Computer is a device in the digital world that used to execute software instructions to perform a wide variety of tasks. Part IV: Write brief and clear answer on the provided space only 18. List down the benefits of cluster computing(1.5pts) 1) Resources pooling 2) High Availability
3) Easy scalability

19. Write data types from data analytic perspective with its example(1.5pts)

* There are Three (3) types of Data analytic perspective and metado i) Structured data. + Excel Service

in) Unstructured data e-q. ISON-audio XML - Files al data base

iii) Semi-structured data eg + JSON

statement is Correct and raise it the statement is Incorrect (lpt each)

- 1. The first step in Big Data Life Cycle with Hadoop is data acquisition.
- 2. Transatlantic Cable is the most important inventions of IR used for communication.
- Hadoop needs only powerful computer for data processing.

Part II: Choose the correct answer among the given alternatives. (1.5Pt each)

L	The active management of data over its life cycle to ensure it meets the necessary data
	quality requirements for its effective usage.

A. Data Curation

C. Data Usage

B. Data Acquisition

D. Data Analysis

2. A term that describes the information flow within a big data system as a series of steps needed to generate value and useful insights from data.

A. Data

C. Hadoop

B. Data value chain

D. Clustered computing

3. An attribute of data that tells the compiler how the programmer intends to use the

A. Unstructured data

C. Big Data

B. Meta data

D. None

4. Which is better to address the high storage and computational needs of big data?

A. Cloud computing

C. Block chain

B. Clustered computing

D. HCI

5. If you select a photo in your photo and see details like size, type and date described as

A. Structured data

C. Semi-structured

B. Meta data

D. Unstructured

6. Which one of the following statement is true?

A. The primary industry involves getting raw materials e.g farming, and fishing.

B. The quaternary industry involves manufacturing e.g. making cars and steel.

C. The secondary industry provides a service e.g. teaching and nursing.

D. Tertiary industries involves research and development industries e.g. IT.

7. A devices that provide specific functions, including device-to-device interfacing, data communication, signal processing and data display.

A. Network devices

C. Microprocessor

B. Logic Devices

D. Memory Devices

8. Which one of the following data file is an Example of Structured data?

A. Xml

C. NO-SQL

B. JSON

D. Excel

Coll	ege of Natural	l and Comp	utational So	elences Social S	Science
Coll Introduction to	Emerging Tec	chnologies (EmTe1011)	for Social	
	Mid-term e	exam (total	point 30%)	Date: Dece	mber 2

Date: December 23, 2019 Time allotted: 1hr. Section: Select campus/school: CSS | CHLSJC | CEBS | CBE-FBE | CBE-Commerce | CLGS | Art | Yared General instruction: The exam contains total of 30 questions provided in three parts: true/false, multiple choice, and short answer. All answers should be choice, and short answer. All answers should be written on the answer sheet included at the bottom of page 3. Switch-off mobile phone 3. Switch-off mobile phone. Part I: True or False (1 pt each) 1. When apps move from the cloud back to on-premises it is known as cloud repatriation. 2. Data curation involves key activities concerned with annotating data so that it becomes easily 3. Real-time processing is most useful when dealing with very large datasets that require quite a bit of 4. Sophia has been designed by Ethiopian Engineers and is an example of limited memory AI type. Self-driving cars are example of reactive machines artificial intelligence. Part II: Multiple Choice (1 pt each) Which of the following is regarded as smart revolution? c. Industrial revolution (Second revolution) a. Information revolution d. Knowledge revolution b. Agriculture revolution 2. Which of the following factor is not considered as a driver of information revolution? a. The growth of information-based occupation b. The invention artificial intelligence c. The widespread of cheap personal computers d. The advent of the Internet 3. A device that provides interfacing, data communication, signal processing and other key similar functionalities is c. Logic device a. Microprocessor d. Network device b. Memory device 4. Which of the following is not a future trend of networks? a. 5G technology b. Rise of centralization c. Embedded computation d. Network developments in edge computing 5. Stage of industrial revolution characterized by the use of IoT, AI, and Big Data Technologies to the industry that will allow the intelligent production.

a. Industry 1.0

b. Industry 2.0

6. The bi-direction information flow between a. Neuro-modulation b. Social Computing	
of-direction information flow between	
a. Neuro-modulation	n a human brain and a
b. Social Computing	and a machine is referred to
Computing	c. Human Machine Interface d. Brain Computer I
7. Agricultural	d. Brain Computer Interface
a lad mass crop production technology	orio-
7. Agricultural mass crop production technologia. Industrial revolution b. First Agricultural revolution	ogies were invented during
b. First Agricultural revolution	c. Second period
& Down	d This agricultural ross
o. Poorly designed human-mack:	c. Second Agricultural revolution d. Third Agricultural revolution can lead to many unexpected problems. All can be
classic example, except interfaces of	can lead to many
a. Three Mile Island again.	unexpected problems
b. A nuclear meltdown accident in USA c. Accidents in avieti	All can be
recidents in average	
d. Explanation of Chabots	
O All	
9. All are characteristics that determine the qualit a. Timely b. Accuracy	
a. Timely	ty of information
b. Accuracy	d In-
c. Completeness	d. Inconsistency
	e. All of the above
10. The goal of most big data systems is	
a. To save cost	
b. To reduce complexity	c. To surface insight
11. If you select one photo in your phone and see det captured date, this is a. an integer data	d. To secure data
captured data distribution in your phone and see del	tails like the size tree.
a. an integer data	one, type, location, and image
b. a metadata	c. a semi-struct
12. Which of the following is wrong about data type?	- u data
b. A data type is an attribute of data in integer b. A data type is about the structure of data su structured.	ich as structured unstructured
C. A data type is the structure of the data for	and semi-
c. A data type is the structure of the data for a d. A data type is data about data in metadata	computer programming.
уро із апт	
13. What are the different activities of Big-data life cycle	le?
a Incent' the parcieting data confinding an	d and t
b. Acquisition, analysis, curation, storage, and u	Isage.
c. Veracity, variability, and value. d. Input, processing, and output.	
d. Input, processing,	One of the
14. With respect to "commuting and analyzing Big data",	c. Apache Flink
a. Apache Storm	d. Apache Speet
a. Apache Storm b. Apache Hadoop's MapReduce b. Apache Hadoop's MapReduce 15. Which of the following are the applications of Chatbot a. Google Assistance	\$7
15. Which of the following are the app	C Sinit
	c. Siri in iphone
b. Google Home	d. None of the above
